CONVEYORIZED PIN TABLE

The table **140** has a 10 by 10 cm net of holes which allows to insert special rounded head pins or the alignment of stripes and plaid fabric, without damaging the fibers. As the lay become thicker, the pin can be lifted all together by a motorized system. The peculiar innovation of this table is the integrated conveyer

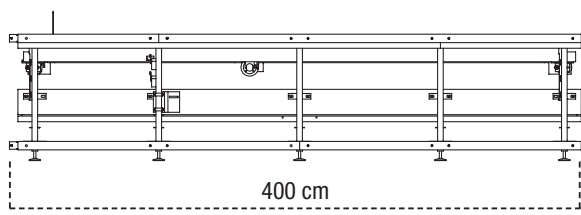

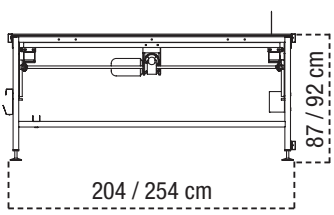

system, which allows to easily move the lay to the cutting, without losing the fabric alignment. Available in sections of 4 or 6 meters, it is supplied complete with with full set of rails, required for the running of our spreaders machines.
